## Education

**The National Institute Of Engineering, Mysore**

Sep 2023 – Present

*B.E in Computer Science (Artificial Intelligence and Machine Learning)*

**CGPA: 9.53**

## Core Computer Science Coursework

- Data Structures & Algorithms
- Design & Analysis of Algorithms
- Database Management Systems (DBMS)
- Operating Systems
- Computer Networks
- Artificial Intelligence & Machine Learning
- Software Engineering

## Projects

**LawMate – AI Legal Document Assistant** | *Python, OCR, GeminiAI API, MERN*

- Engineered an AI-assisted legal document processing system that extracts deadlines, payment terms, and key contractual obligations from scanned and digital documents using OCR-based text extraction and structured parsing.
- Designed backend logic to transform unstructured legal text into structured summaries, automated checklists, and task-oriented outputs to improve document readability and usability.
- Integrated an AI-powered chatbot to handle user queries, provide contextual explanations, and generate simplified legal insights based on extracted document data.

**Smart Complaint Management System (SCMS)** | *Node.js, Express.js, MySQL, React.js, JWT*

- Developed a full-stack complaint resolution platform with secure JWT-based authentication and role-based access control for Students, Admins, and Principal dashboards.
- Architected and implemented a normalized relational database schema (5+ tables) with optimized queries, foreign key constraints, and structured complaint lifecycle tracking.
- Built automated escalation workflows and real-time complaint status updates, ensuring transparent tracking and streamlined issue resolution across departments.

**FieldConnect – Offline Reporting System** | *Node.js, Express.js, MongoDB, Multer, Cloudinary*

- Designed and implemented RESTful APIs for geolocation-based field reporting with secure image upload handling and structured report storage.
- Implemented offline-to-online data synchronization logic to ensure reliable report persistence in low-connectivity environments, minimizing data loss.
- Optimized MongoDB schema with indexed collections and integrated Cloudinary for scalable cloud-based image storage and efficient media retrieval.

## Technical Skills

**Languages:** JavaScript, Python, Java, C, SQL

**Backend Development:** Node.js, Express.js, REST APIs, JWT Authentication, Role-Based Access Control

**Frontend:** React.js

**Databases:** MySQL (Relational Schema Design), MongoDB (Indexed Collections)

**Cloud & Deployment:** Render, Netlify, Cloudinary

**Tools:** Git, GitHub, Postman, VS Code

**Core Concepts:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

## Experience

**JPMC Code for Good Hackathon Runner-Up**

July 2025

*Backend Developer*

*Bengaluru, India*

- Selected for a competitive 24-hour hackathon to build technology solutions for non-profit organizations.
- Designed and implemented backend REST APIs with authentication and database integration under strict time constraints.
- Collaborated within a 6-member cross-functional team to deliver a scalable prototype solution.
